

Panel Design Options

ExSteel manufactures a wide selection of high quality roof, wall and liner profiles. Our comprehensive selection of steel panels is ideal for use with new buildings or retrofit projects using any type of construction.

STORMSEAL

ROOF, WALL & LINER

This popular industry standard profile suits any project and is available in both narrow and wide ribs versions. This strong and versatile panel has 36" wide coverage with 1.5" deep ribs in 12" spacing.

STRUCSEAL

ROOF, WALL & LINER

For demanding applications or for a unique look, this durable heavy duty panel is a great choice. With 1.5" deep ribs on 6" spacings, this 36" or 30" wide coverage panel has the strength for any application. It is available in both wide rib and narrow rib versions to suit the job.

VERSASEAL

ROOF, WALL & LINER

As an all around versatile option, this economic 3/4" rib, low profile panel features an anti-siphon groove for additional water protection. Each sheet cover 36" with 9" spacing between ribs.

DIAMONDSEAL

ROOF, WALL & LINER

An extremely popular, low-profile panel for any application or construction type that is a wise economical choice. It features crisp uniform 5/8" deep ribs on 6" spacing covering the 36" wide panel.

RTL-24

STANDING SEAM ROOF

As the benchmark of roofing systems, this standing seam roof features extreme weather tightness and superior wind uplift performance for high or low pitch applications. The system uses steel clips to eliminate screws penetrating the 24" wide, 3" deep panel.

TECHLOC

ROOF & WALL PANEL

This specialized 16" wide, 3" deep panel is available in a number of configurations from flat to sculptured, with optional flutes. It is best suited for architectural applications or self-framing construction.

LINERSEAL

ROOF & WALL LINER NEW

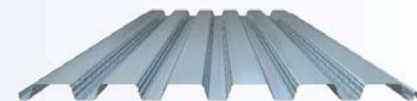

LinerSeal is the basis of a wall or roof standoff insulation system and provides an attractive low profile look to the interior of any building. The 31.5" (800mm) wide panel can be ordered with optional factory applied caulking for use as a vapour barrier.

RD-156/CD-156

ROOF & COMPOSITE DECK

Heavy duty steel deck is the superior choice for built-up roofs and concrete floor slabs. As a 36" wide panel, it features a hook lap and 1.5" deep ribs on 6" centers. Embossments are available for composite applications.

STOCK MATERIALS AND COLOURS

Please contact a sales representative for current material and colour availability. Many standard and optional colours and coatings are available upon request.

TRIMS

ExSteel offers a wide range of standard trims to compliment our panels. Custom trims are easily designed and made to order.
